

Mori Building to Stage Vaccinations for Some 100,000 Employees, Etc. at Toranomom Hills, Roppongi Hills and ARK Hills as Hills-wide COVID-19 countermeasures

Toranomom Hills will also be a venue to administer vaccinations to Minto City residents on weekends

Tokyo, June 11, 2021 — Mori Building Co., Ltd., Japan's leading urban landscape developer, announced today that in response to the national government's recently announced policy permitting companies to organize COVID-19 vaccinations on site, vaccinations for some 100,000 people will be carried out at Toranomom Hills, Roppongi Hills and ARK Hills, the properties managed and operated by Mori Building. The vaccinations, which will use the Moderna vaccine distributed by the national government, will be scheduled to take place from June 21 to September 27 (planned).

In addition to some 7,000 Mori Building and group employees and their families, vaccinations also will be offered to employees of facility management/operation partners and tenant companies, residents, retail facility staffs, etc. of our properties. Through such large-scale and rapid vaccination of the entire city, Mori Building will contribute to the realization of safe and secure urban life.

Also, in response to an official request, Mori Building will provide space for Minato City to administer vaccinations to city residents at Toranomom Hills, the largest of the three venues, on Saturdays and Sundays.

Mori Building, as part of its commitment to continuously contribute to a safe, secure, and comfortable city, looks forward to organizing timely, large-scale vaccinations at properties under its management. Through this and other Hills-wide initiatives related to COVID-19, Mori Building is working to enhance Tokyo's magnetism as a city where people can live, work and interact with others with peace of mind.
