

# Mori Building Strengthens Internal System for Sustainability Management

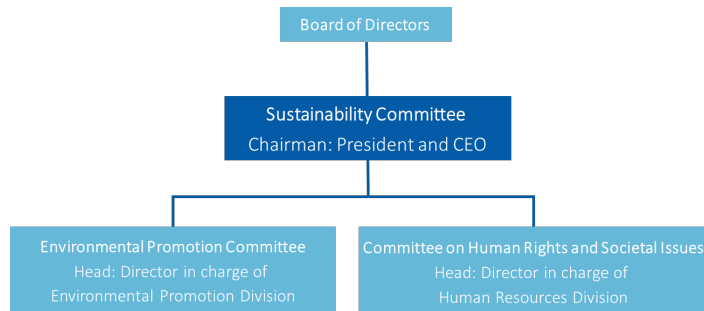

Contributing to a more sustainable society under the philosophy of Create Cities, Nurture Cities

Tokyo, July 26, 2022 — Mori Building Co., Ltd., Japan’s leading urban landscape developer, announced today that it has strengthened its company-wide sustainability-promotion system, including by creating a new internal unit, the Sustainability Committee led by the President and CEO, on July 1, aiming to further Mori Building’s contributions to a more sustainable society as well as regional development and the safety, health and happiness of people under the company’s philosophy of Create Cities, Nurture Cities.

## Sustainability Promotion System

The Sustainability Committee is chaired by the company’s President and CEO and comprises two separate subcommittees: the Environmental Promotion Committee and the Committee on Human Rights and Societal Issues. These subcommittees will develop and manage cross-sector initiatives in their respective fields and then report regularly to the Sustainability Committee. The Sustainability Committee deliberates important matters regarding climate change, human rights, supply chain management and more, in addition to supervising and monitoring the two subcommittees. Mori Building’s board of directors will receive reports from the Sustainability Committee on a regular basis and consider critical issues from an overall viewpoint. In conjunction with the establishment of this new sustainability promotion system, Mori Building has also formulated the Mori Building Group Human Rights Policy and the Mori Building Group Sustainable Procurement Guidelines.

## Sustainability Website

A new [Sustainability Website](#) has been launched on the Mori Building website to communicate the company’s vision of and commitment to sustainability, and also to present case studies of sustainability initiatives. The new website also provides stakeholders with comprehensive information on policies and systems regarding Mori Building’s sustainability initiatives, with a particular focus on environmental, social and governance (ESG) issues. Going forward, Mori Building plans to promptly disclose additional information about its sustainability activities. The Mori Building Sustainability Website site is currently published in Japanese only, but an English version is scheduled to launch in around 2022.

## Background

Over the years, Mori Building has carried out urban redevelopment projects aimed at creating sustainable urban centers where people can live, work, and interact healthfully and vigorously, both physically and mentally. Mori Building has underpinned these initiatives by building strong and trustworthy relationships with local residents and other stakeholders. Based on the Vertical Garden City urban regeneration model, which concentrates diverse urban functions within walking distance, the company is redesigning cities to be resistant to earthquakes and other natural disasters, but also to offer lush greenery and to protect the environment and biodiversity. Taking the view that the completion of its urban centers and buildings are just the beginning, rather than the end, Mori Building has developed a unique town-management system and organization to continuously connect people, companies, towns and local communities through various events and community activities. ARK Hills (completed in 1986), Roppongi Hills (completed in 2003), Toranomon Hills (completed in 2014) and many other Hills properties are testaments to the company's belief in sustainability as well as its long history of achievement.

With the newly announced strengthening of the company's sustainability-promotion system, Mori Building now looks forward to accelerating its efforts over the medium to long term to realize a more sustainable society based on key themes including decarbonization, resource recycling, local communities, and human rights.

Mori Building is committed not only to its soundness and viability as a company, but also to providing work environments and systems in which employees can enjoy excellent mental and physical health as they contribute to the advancement of urban development in Mori Building's unique style, ultimately to help the company fulfill its responsibilities to people, society and the environment under the philosophy of Create Cities, Nurture Cities.

## About Mori Building

Mori Building is an innovative urban developer based in Tokyo. The company is committed to maximizing the magnetic power of cities by creating and nurturing safe, sustainable and cosmopolitan urban centers based on its unique Vertical Garden City concept of high-rise centers for business, education, leisure and residence. The concept is applied in the company's many leading-edge projects, including ARK Hills, Roppongi Hills and Toranomon Hills in Tokyo and the Shanghai World Financial Center. Mori Building is also engaged in real estate leasing, project management and consultation. Please visit [www.mori.co.jp/en](http://www.mori.co.jp/en)
